

MI paste for Children:

Brush with toothpaste in the morning and at night. Use Fluoride toothpaste if your child can spit.

Apply a generous layer of MI Paste to your child's teeth surfaces using a cotton swab or your finger.

Leave undisturbed for 3 minutes.

Have your child spread the remaining MI Paste throughout their mouth using their tongue.

Spit, but do not rinse. Leave the excess to slowly dissolve.

The longer it is in contact with their teeth and remains in their saliva, the better.

DO NOT USE IF ALLERGIC TO DAIRY PRODUCTS, BUT OK FOR LACTOSE INTOLERANCE.
